
AFFO User Service

Release 1.0.4

Affo Ltd.

Feb 05, 2020

CONTENTS

1	Getting Started	3
2	Contents	5
3	Indices and tables	9
	HTTP Routing Table	11

AFFO User Service is a simple User sending service. The main feature of this service is an ability to round-robin User gateways to retry the message.

AFFO User Service is Open Source and licensed under the [BSD License](#).

GETTING STARTED

- If you're new to AFFO User Service you can get started by following the first-steps tutorial.

CONTENTS

You may share and adapt the material, even for commercial purposes, but you must give the original author credit. If you alter, transform, or build upon this work, you may distribute the resulting work only under the same license or a license compatible to this one.

Note: While the *AFFO User Service* documentation is offered under the *Creative Commons Attribution-ShareAlike 4.0 International* license the *AFFO User Service software* is offered under the *BSD License (3 Clause)*

2.2 Getting Started

2.3 Contributor's Guide

Contributions are always welcome and greatly appreciated!

2.3.1 Code contributions

We love pull requests from everyone! Here's a quick guide to improve the code:

1. Fork the repository and clone the fork.
2. Create a virtual environment using your tool of choice (e.g. `virtualenv`, `conda`, etc).
3. Install development dependencies:

```
pip install -r requirements.txt
pip install -r requirements-test.txt
```

4. Make sure all tests pass:

```
python setup.py test
```

5. Start making your changes to the **master** branch (or branch off of it).
6. Make sure all tests still pass:

```
python setup.py test
```

7. Add yourself to `AUTHORS.rst`.
8. Commit your changes and push your branch to GitHub.
9. Create a [pull request](#) through the GitHub website.

2.3.2 Documentation improvements

We could always use more documentation, whether as part of the introduction/examples/usage documentation or API documentation in docstrings.

Documentation is written in `reStructuredText` and use `Sphinx` to generate the HTML output.

Once you made the documentation changes locally, run the documentation generation:

```
python setup.py build_sphinx
```

2.3.3 Bug reports

When [reporting a bug](#) please include:

- Operating system name and version.
- *affo-user-service* version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

2.3.4 Feature requests and feedback

The best way to send feedback is to file an issue on [Github](#). If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.

2.4 REST API

POST `/auth/login/`

Issues JWT token for the registered user from an email and a password

Status Codes

- `200 OK` – Success

POST `/auth/refresh/`

Refresh JWT token

Status Codes

- `200 OK` – Success

- POST /auth/logout/**
Adds the specified JWT token into the blacklist
- Status Codes**
- 204 No Content – Success
- GET /auth/verify_token/**
Verify JWT token
- Status Codes**
- 200 OK – Success
- POST /user/**
Register a new user
- Status Codes**
- 201 Created – Success
- GET /user/{user_id}/role/**
Retrieves a user roles by an identifier.
- Parameters**
- **user_id** (*string*) – A user identifier
- Status Codes**
- 200 OK – Success
- PATCH /user/{user_id}/role/**
Update user roles by an identifier.
- Parameters**
- **user_id** (*string*) – A user identifier
- Status Codes**
- 200 OK – Success
- POST /user/{user_id}/set_password/**
Set a user password
- Parameters**
- **user_id** (*string*) – A user identifier
- Status Codes**
- 200 OK – Success
- GET /user/{user_id}/**
Retrieves a user by an identifier.
- Parameters**
- **user_id** (*string*) – A user identifier
- Status Codes**
- 200 OK – Success
- PATCH /user/{user_id}/**
Update a user by an identifier
- Parameters**

- **user_id**(*string*) – A user identifier

Status Codes

- **200 OK** – Success

DELETE /user/{user_id}/

Delete a user by an identifier

Parameters

- **user_id**(*string*) – A user identifier

Status Codes

- **204 No Content** – Success

POST /password/reset/

Reset a user password

Status Codes

- **200 OK** – Success

POST /password/reset/confirm/

Confirm a user password reset

Status Codes

- **200 OK** – Success

POST /verification/phone/

Verify a phone

Status Codes

- **200 OK** – Success

POST /verification/phone/confirm/

Confirm a phone verification

Status Codes

- **200 OK** – Success

INDICES AND TABLES

- genindex
- modindex
- search

HTTP ROUTING TABLE

/auth

GET /auth/verify_token/,7
POST /auth/login/,6
POST /auth/logout/,6
POST /auth/refresh/,6

/password

POST /password/reset/,8
POST /password/reset/confirm/,8

/user

GET /user/{user_id}/,7
GET /user/{user_id}/role/,7
POST /user/,7
POST /user/{user_id}/set_password/,7
DELETE /user/{user_id}/,8
PATCH /user/{user_id}/,7
PATCH /user/{user_id}/role/,7

/verification

POST /verification/phone/,8
POST /verification/phone/confirm/,8
